Technology enthusiast focused on mobile networks, information management and systems, security and network architectures. Organized communicator with a strong team spirit, motivated to apply my technical knowledge in a business context and contribute to innovation projects.

ACADEMIC BACKGROUND

Master's in Telecommunications and Informatics Engineering *September 2025 - 2027*
Instituto Superior Técnico – University of Lisbon
Double specialization in Telecommunications Systems & Network and Systems Management.

Bachelor's in Electronics, Telecommunications and Computer Engineering *September 2021 – July 2025*
Instituto Superior de Engenharia de Lisboa – Polytechnic University of Lisbon

RELEVANT PROJECTS

Centurion (Vehicular Networks Course) *November 2025 – June 2025*
Developed with my team a smart helmet for e-scooter riders, based on C-ITS principles, with vehicle detection using GPS and ultrasonic sensors, project recognized with the Critical Techworks Merit Award, Joy in Motion.

Characterization and Evaluation of CSS-LoRa Signal Collisions (Bachelor's Final Project) *February 2025 – July 2025*
Project focused on the characterization of LoRa signals, collision and interference analysis, signal processing and hardware-software integration, using Arduino IDE for control, SDRSharp for monitoring and MATLAB for data analysis.

PROFESSIONAL EXPERIENCE

Summer Intern — NOS SGPS *July 2026 – September 2026*
I was part of Data Engineering & Analytics team, working on an internal data portal.

- Built an end-to-end Complaints Management module (BigQuery/CloudSQL backend via Cloud Functions + frontend), including CRUD forms, status workflow, and many-to-many data relationships. Migrated legacy data from the old PostgreSQL-based portal into the new platform.
- Developed a Logs module: end-to-end page-load time tracking, new filters (date, time, user, module, test-portal toggle), and a fix for lost audit events in production.
- Diagnosed and fixed performance bottlenecks (blocking async calls, unoptimized queries, no caching), cutting page load times from ~10s to under 1s. Built SLA/statistics dashboards and Grafana dashboards (BigQuery SQL) to monitor page load times, logins, and portal usage.

Stack: Python, FastAPI, Streamlit, BigQuery, CloudSQL, Google Cloud Platform, Grafana.

ACTIVITIES & VOLUNTEERING

Innovation Department Member — JUNITEC *October 2026 – Present*
Taking part in an innovation bootcamp and contributing to the development of a startup, from ideation to concept validation.

Ambassador Program — NOS SGPS *September 2025 - Present*
I represent NOS in the university environment, promoting the brand and career opportunities, while developing communication, proactivity and teamwork skills.

JET – Jornadas Tecnológicas e Empresariais · External Relations Department

Team Leader *August 2026 - Present*
I lead the department responsible for connecting companies and the academic community at IST's largest business fair – Oeiras Campus, coordinating the team and partnerships that generate recruitment, networking and collaboration opportunities.

Team Member *September 2025 – July 2026*
I contributed to connecting companies and the academic community, fostering a dynamic space for recruitment, networking and collaboration opportunities.

BEST Entrepreneurship Experience — BEST Lisbon *March 2026*
I took part in an entrepreneurship competition to solve corporate challenges through engineering principles, applying innovation methodologies and business models to deliver high-impact solutions through a pitch, and was awarded 1st place.

Missão País *February 2026*
An enriching volunteering experience, where I took part in social action, community support and human development in local communities.

Volunteer — Web Summit Lisboa *November 2023 & November 2024*
I had the opportunity to join the Response & Support team at the event over two editions, providing direct support to attendees and internal teams.
